

# eCRM User Guide

---

Updated August 16, 2026 · Live Sales workspace and Admin Console Operations Cockpit captures

eCRM brings customer context, pipeline work, proposals, orders, production, finance, and performance into one operating workspace. This guide explains the pages available to the two current application roles:

- **Sales** users plan and complete customer-facing work.
- **Admin** users supervise company operations, reporting, finance, products, production configuration, and team performance.

There is no separate **Manager** application role. The commercial workspace is labelled **Sales**; managers who need team controls, approvals, or configuration use the **Admin** role. The screenshots in this guide were captured from the current local application with seeded demonstration data on August 16, 2026. Names, amounts, and credentials shown here are not production data.

## 1. Sign in

---

Open the eCRM URL provided by your administrator. For local development, use `http://localhost:3000/login`.

SECURE CUSTOMER-CELL WORKSPACE

## Lead-to-cash workspace for training, safety, software, and content delivery.

Track leads, proposals, booked orders, production stages, invoices, collections, and sales follow-ups in one secure operating view for your team.

**Sales pipeline**  
Leads, opportunities, proposals, and daily sales work.

**Delivery control**  
Order booking, production stages, owners, and due dates.

**Finance visibility**  
Invoices, collections, margins, and incentive readiness.

### Sign in

Access the eCRM workspace.

Email

Password

**Sign in**

Enter your email address and password, then select **Sign in**. The application opens the correct workspace for your role.

The local seed provides these development-only users:

| Role  | Email             | Password    |
|-------|-------------------|-------------|
| Admin | admin@example.com | Admin@12345 |
| Sales | sales@example.com | Sales@12345 |

These credentials are for local development only. Replace them before sharing or deploying the application.

Use **Sign out** in the page header when you finish.

## 2. Choose the right workspace

| If you need to...                               | Use                                                     |
|-------------------------------------------------|---------------------------------------------------------|
| Plan today’s follow-ups and notes               | Sales → <b>My Day</b>                                   |
| Find or update a company or contact             | Sales → <b>Leads, Contacts, or Customer 360</b>         |
| Progress a deal or create a proposal            | Sales → <b>Pipeline</b>                                 |
| Review your own results                         | Sales → <b>Performance</b>                              |
| Review company orders, delivery, or receivables | Admin → <b>Orders, Production, or Finance</b>           |
| Review targets, incentives, or company reports  | Admin → <b>Team performance, Incentives, or Reports</b> |
| Maintain products or delivery stages            | Admin → <b>Products or Production config</b>            |

### Current role views

The Sales workspace uses a horizontal navigation bar for day-to-day commercial work. The Admin Console uses a left navigation panel, with operating controls first and configuration grouped under **Setup**.

# Sales Workspace

---

Sales users see a horizontal navigation bar. Their pages focus on daily work, customer records, pipeline movement, and personal performance.

## 3. Sales Operations Cockpit

---

The shared **Operations Cockpit** is the quickest company-wide summary. It groups live work into **Operations health**, **Commercial and cash**, and **Operating detail**. Health cards and chart panels link directly to pipeline, orders, finance, production, and My Day follow-up work.

Use the links inside each cockpit section to open the related pipeline, order, finance, production, or follow-up detail. Trend and aging panels show an explicit history fallback until enough period data exists.

## 4. My Day

**My Day** is the sales user's personal planning workspace.

Use it to:

1. Review open and completed tasks for the selected date.
2. Add a task or text note.
3. Record or upload a voice note.
4. Review suggested actions created from available note context.
5. Close, reopen, move, or cancel work as the day changes.

My Day items are personal to the signed-in user. Creating a note does not silently modify the underlying customer record.

## 5. Leads, contacts, and Customer 360

### Leads

**Leads** holds company-level customer and prospect records.

Use search and filters to find a contact, then open the record when you need its customer relationship and activity context.

# Customer 360

Customer 360 combines the customer’s commercial and operating history.

Use it when preparing for a conversation or handoff. It brings together account details, contacts, notes, activities, pipeline, proposals, orders, production, finance events, and ownership history.

## 6. Pipeline and proposals

Pipeline lists sales opportunities and their current stages.

SPLITS

ACTIONS

To progress a sale:

1. Open **Pipeline** and create or select an opportunity.
2. Confirm the customer, owner, expected value, probability, and next action.
3. Move the opportunity through the configured stages.
4. Create a proposal from the opportunity.
5. Add the commercial summary, terms, delivery assumptions, and product or service line items.
6. Record proposal status changes such as sent, accepted, rejected, expired, or withdrawn.
7. When a proposal is accepted, use its **Book order** action to create the order.

Proposal records preserve the commercial snapshot used at that point in the sale.

## 7. Sales performance

**Performance** shows the signed-in salesperson's results for a selected period.

|---------------------------------------------|---------------|---------------|-----|-------------|--------|--------------------------|
| <div>eLearning</div> <div>Sort 10</div>     | ELEARNING     | eLearning     | 18% | elearning   | Active | Deactivate eLearning     |
| <div>Video shoot</div> <div>Sort 20</div>   | VIDEO-SHOOT   | Video shoot   | 18% | video_shoot | Active | Deactivate Video shoot   |
| <div>VR/AR</div> <div>Sort 30</div>         | VR-AR         | VR/AR         | 18% | vr_ar       | Active | Deactivate VR/AR         |
| <div>Animation</div> <div>Sort 40</div>     | ANIMATION     | Animation     | 18% | animation   | Active | Deactivate Animation     |
| <div>Other service</div> <div>Sort 50</div> | OTHER-SERVICE | Other service | 18% | No template | Active | Deactivate Other service |

Keep names, descriptions, pricing defaults, tax defaults, and active status current so sales users create consistent proposal line items.

# Production config

Production config defines reusable delivery templates and their stages.

| STAGE                            | DESCRIPTION | DURATION     | SORT          | REQUIRED          | ACTION                |
|----------------------------------|-------------|--------------|---------------|-------------------|-----------------------|
| <div>Key</div> <div>script</div> | <div></div> | <div>3</div> | <div>10</div> | <div>Active</div> | <div>Save stage</div> |
| <div>Name</div>                  | <div></div> |              |               |                   |                       |

Use it to manage stage order, expected duration, required status, active status, and product or service mappings. Changes affect future operating choices; review them before saving.

## Settings

Settings is available only in a deployed customer-cell runtime. It contains the cell identity, included modules, business defaults, local users, and eligible integration-delivery controls. It is intentionally unavailable in the shared local demo runtime used for these screenshots.

Only administrators can change these values. Confirm the business impact of currency, included modules, local-user access, or other shared defaults before updating them.

## 14. Role and data rules

- A deployed customer cell has its own data, users, settings, branding, and integration binding. The cell is selected by deployment configuration, not by a browser control.
- Within a customer cell, Sales and Admin users work from shared company records.
- Ownership indicates responsibility and supports filtering, targets, and incentives; it is not a private-record boundary between salespeople.
- The current application roles are **Sales** and **Admin**. Admin-only setup and team-control pages are not shown in Sales navigation.
- SignalLoop or other connected applications exchange approved shared records through APIs; they must not write directly to the eCRM database.

- Browser voice transcription depends on browser support. Uploaded audio can be stored even when automatic transcript text is unavailable.

## 15. Troubleshooting

---

| Problem                            | What to check                                                                                              |
|------------------------------------|------------------------------------------------------------------------------------------------------------|
| You return to the sign-in page     | Your session may have expired. Sign in again.                                                              |
| A page is missing from navigation  | Confirm that you are using the correct Sales or Admin account.                                             |
| Expected records are missing       | Clear filters and confirm the selected owner, period, stage, or status.                                    |
| A Sales user cannot open setup     | Products, production configuration, settings, and team controls require Admin access.                      |
| Voice recording is unavailable     | Confirm microphone permission and browser speech-recognition support.                                      |
| Local login shows a database error | Confirm PostgreSQL is running on the port configured by <code>DATABASE_URL</code> , then refresh the page. |

For local setup, database migration, seeding, and integration details, see [ `docs/getting-started.md` ] (`../getting-started.md`).
